-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2613

1. the foreign references have been considered as best understood.
2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-2 and 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Green et al (2002/01543641).

In regard to claims 1 and 4, Green teaches a first optical wireless communications apparatus (7, which he says is connected to a TV/video display) for transmitting a pilot beam (12), a second wireless communication apparatus (3 which has a video supply apparatus/signal 14) and receiving the pilot beam (12, in box 3, figure 2). In regard to the modulator of claim 12, see paragraph 35 in which he says there may be a separate modulator. In regard to the axis, it is obvious that the axis must match in order for the system to work since optical signals are directional. In regard to the demodulator, see paragraph in which he teaches the signal is processed (demodulated). In that the second apparatus uses the signal, it would appear that the signals are "reproduced" for the second wireless apparatus. In regard to claims 2 and 5 and the remote control, see paragraph 32. in regard to claims 3 and 6, he teaches that element 3 can send status reports to the central distribution system. It is well known for users to send information with regard to their status in order to let the central distribution system know which signals to send.
